APPLICATION FOR PERMIT UNDER POLLUTION CONTROL ACT, 1967 (Effluent)

Preamble—Numerous alternatives have been proposed for improvements to Penticton's Water Quality Control Centre and its wastewater disposal procedures. Concerns have been expressed about the impact of each alternative on the environment. These concerns are stated in a variety of documents that have been examined in the course of this review effort. The concerns can be grouped into three

categories—health, fisheries, and limnology.

Each of these concerns calls attention to an important environmental impact that must be considered in the selection of an alternative and in the design of the facilities. It is the opinion of the City of Penticton that design of the selected facilities in accordance with the primary objectives (AA objectives) of the Pollution Control Branch will adequately overcome the aforementioned concerns. Also, because the objectives are not specific enough for some parameters in surface water discharge, the design of the expanded Water Quality Centre will include the following standards for receiving waters: Un-ionized ammonia concentration, less than 0.02 mg/l; chlorine concentration, less than 0.002 mg/l.

The Okanagan Basin Water Study recommended a phosphorus removal of 80 per cent, but the City of Penticton will be designing for a 90 per cent removal.

A summary of wasteloads, treatment requirements, and costs of the various alternatives was submitted for review by Government regulatory agencies concerned with pollution control. The Penticton City Council analysed the alternatives and a number of variations. Criteria considered included (1) protection of health; (2) protection of aquatic life; (3) protection of lake quality; (4) cost; (5) reliability of the system; (6) ability to implement the plan.

Based on this analysis, treatment and direct discharge to Skaha Lake was selected as the most desirable plan.

The selected plan will include secondary treatment, phosphorus removal, and chlorine disinfection. Treated effluent will be discharged into Skaha Lake through an outfall diffuser at a depth of 100 feet, at a location over 2,000 feet from the north shore of the lake.

Upon the issuance of a new permit the present permit for the discharge of 1,800,000 gallons per day into the Okanagan River Channel will be withdrawn.

THIS APPLICATION is to be filed with the Director, Pollution Control Branch, Parliament Buildings, Victoria, B.C. Any person who qualifies as an objector under section 13 (2) of the *Pollution Control Act, 1967* may, within 30 days of the date of application, or within 30 days of the date of publication in *The British Columbia Gazette* or in a newspaper, or, where service is required, within 30 days of the serving of a copy of the application, file with the Director an objection in writing to the granting of a permit, stating the manner in which he is affected. Those who do not so qualify may file with the Pollution Control Board an objection in writing under section 13 (6), in the same manner and time period as described above.

City of Penticton, of 171 Main Street, Penticton, B.C., hereby applies to the Director for a permit to discharge effluent from a municipal sewerage system located within the City of Penticton into Skaha Lake, and gives notice of application to all persons affected.

The land upon which the works are located is Lot 1 of Plan 27543, dated January 17, 1977.

The discharge shall be located approximately 2,100 feet from the shore directly south of the Okanagan River outlet into Skaha Lake.

The quantity of effluent to be discharged is as follows: Average annual daily discharge (based on operating period),

3,400,000 mgd. Maximum daily discharge, 4,000,000 mgd.

The operating period during which the effluent will be discharged is continuous.

The characteristics of the effluent discharged shall be equivalent to or better than total suspended solids, 40 mg/l; BOD, 30 mg/l; pH, 6.5–8.5; temperature, 10–22°C; faecal coliform, 200 mpn/100 ml; phosphorus, 1 mg/l; ammonia, 25 mg/l; total nitrogen, 30 mg/l.

The type of treatment to be applied to the effluent before discharge is primary treatment, secondary biological treatment, chemical precipitation, and disinfection.

I, J. E. Rheame, Administrator, hereby certify that a copy of this application has been received by the Regional District of Okanagan-Similkameen.

The application, dated on the 28th day of April 1977, was posted on the ground in accordance with the Pollution Control Regulations.

APPLICATION FOR PERMIT UNDER POLLUTION CONTROL ACT, 1967 (Refuse)

Preamble—The land is family owned and zoned agriculture. We wish to have it remain thus. Twelve acres should support 12 cows. At present it won't support four cows on a yearly basis, because of its low, wet nature. Ten-foot deep trenches will be dug and the below-mentioned material put in, then covered by 5 to 6 feet of soil, thus raising the land. Since this is an enclosed package no pollution will result.

THIS APPLICATION is to be filed with the Director, Pollution Control Branch, Parliament Buildings, Victoria,

B.C. Any person who qualifies as an objector under section 13 (2) of the *Pollution Control Act, 1967* may, within 30 days of the date of application, or within 30 days of the date of publication in *The British Columbia Gazette* or in a newspaper, or, where service is required, within 30 days of the serving of a copy of the application, file with the Director an objection in writing to the granting of a permit, stating the manner in which he is affected. Those who do not so qualify may file with the Pollution Control Board an objection in writing under section 13 (6), in the same manner and time period as described above.

I, George Edward Terry, of 2330 Wilson Avenue, Port Coquitlam, B.C., hereby apply to the Director for a permit to discharge refuse from demolition and land clearing located at Port Coquitlam, and give notice of application to all persons affected.

The refuse-disposal site shall be located at 337 Prairie Road, Port Coquitlam (5½ of NE. ¼ Sec. 5, Tp. 40, Lot 10 N.W.), 12.3 acres, which is approximately at the east end of Prairie Road.

The type of refuse to be discharged shall be wood waste.

The quantity of refuse to be discharged shall be as follows: Average daily discharge (based on operating period), 20 to 150 cubic yards.

The operating period during which the refuse will be discharged shall be 8 a.m. to 5 p.m., continuously.

The nature or characteristics (in per cent by weight) of the refuse to be discharged is estimated to be 80 per cent wood, 3 per cent concrete, 4 per cent dry-wall, 12 per cent soil, 1 per cent shingles.

The type of treatment to be applied to the refuse is compaction and cover weekly.

I, R. J. Hannon, Registration Clerk, hereby certify that a copy of this application has been received by the Greater Vancouver Regional District.

This application, dated on the 29th day of April 1977, was posted on the ground in accordance with the Pollution Control Regulations.
